Apply security settings?

Select Apply

Complete Manual Setup

Select Done

Summary

With Android devices, there are many ways to setup Exchange email accounts. The main considerations are the following.

Domain: Aledo

Username: Windows login ID

Do not include @aledoisd.org in login ID

Exchange server: mail.aledo.k12.tx.us

Use secure connection (SSL)

If the setup asks for Domain\username be sure to use the backslash “\” and not the forward slash “/”.
